PROJECTS

Sign language detection , December 2025 - December 2025

- Project Title: Real-time Sign Language-to-Text Converter
Objective: To bridge the communication gap for hearing and speech-impaired individuals by developing a real-time, user-independent sign language recognition system.
Technologies Used: Python, OpenCV, MediaPipe, TensorFlow, Keras, CNN/LSTM.
Key Features:
Data Collection & Preprocessing: Collected a custom dataset of hand gestures, covering 26 ASL alphabets, utilizing data augmentation to increase model accuracy.
Gesture Recognition Model: Developed a CNN architecture to classify static hand gestures and integrated MediaPipe to extract keypoints for improved accuracy.
Real-time Interface: Created a live webcam feed interface using OpenCV that detects gestures, predicts the alphabet/word, and displays the text in real-time.
Result: Achieved 94% average accuracy on testing, enabling seamless real-time communication.
3. Key Skills to Highlight
Languages: Python
Libraries/Frameworks: OpenCV, TensorFlow, Keras, Med
